Language Translations, Keyboard Mapping and GDS Connection

- Travelport Smartpoint allows the user to mix and operate with multiple system languages in the same record

A screenshot of a settings dialog box in a blue-themed application. The dialog is titled "MYCONNECTION" with a dropdown arrow. It is divided into two main sections: "Cryptic Languages" and "Connection". Under "Cryptic Languages", there are three rows: "Primary Cryptic Language" with a dropdown menu showing "Galileo", "Secondary Cryptic Language" with a dropdown menu showing "Amadeus", and "Keyboard Mapping" with a dropdown menu showing "Not in use". Under the "Connection" section, there is a dropdown menu showing "MyConnection". At the bottom right of the dialog, there are two buttons: "Cancel" and "Save".

- *There is also the option to map the keyboard to include keystrokes relevant to the reservation system.*
- Finally, each terminal window can use a different Client ID or connect to a different host GDS if required. You can then use the Application Menu, select Application settings to configure individual window connections

- HELP menu → User Guide in Smartpoint
